Aceh Emergency Appeal
January-June 2024

SITUATIONAL OVERVIEW

Rohingya refugees have undertaken perilous sea journeys from Myanmar and Bangladesh seeking protection, family reunification, and access to livelihoods and education for years. In the last weeks of 2023 and early 2024, however, the pace of boat arrivals and the number of individuals disembarking in Indonesia rapidly increased. From mid-November 2023 to date, 15 boats carrying 2,026 Rohingya refugees (73% of whom are women and children) have landed in Aceh and North Sumatra, Indonesia.

According to information provided to UNHCR by the new arrivals, the recent increase in the number of individuals undertaking the sea journey has been driven by a number of factors. These include the continued instability in Myanmar, lack of progress in addressing the root causes of Rohingya displacement and enabling conditions conducive for return, growing insecurity and declining humanitarian assistance in the camps in Bangladesh, more active smuggling networks, and a decrease in the cost of sea journeys.

These journeys, often undertaken on unseaworthy vessels, are extremely dangerous. In March 2024, a boat carrying approximately 142 Rohingya capsized off the coast of West Aceh, killing 67 passengers, including at least 27 children. Nearly 1,000 Rohingya refugees traveling by boat perished or went missing at sea in 2022 and 2023, including a boat bound for Indonesia carrying approximately 200 refugees that is believed to have sunk in November 2023. Recently disembarked refugees report experiencing protection and security challenges at sea, including gender-based violence, physical abuse, malnutrition, exploitation, and extortion. Rohingya refugees confirm that they are aware of the risks but still board boats, highlighting the pervasive fear and sense of hopelessness that precipitate their decision to embark on these journeys.

In previous years, as per the 2016 Presidential Regulation 125 on the Handling of Refugees, Rohingya boats in distress were rescued and allowed to disembark in Indonesia by the navy, local authorities, and Acehese coastal communities. Following disembarkation, authorities designated host sites where UNHCR, IOM, and other partners provided protection and basic assistance.

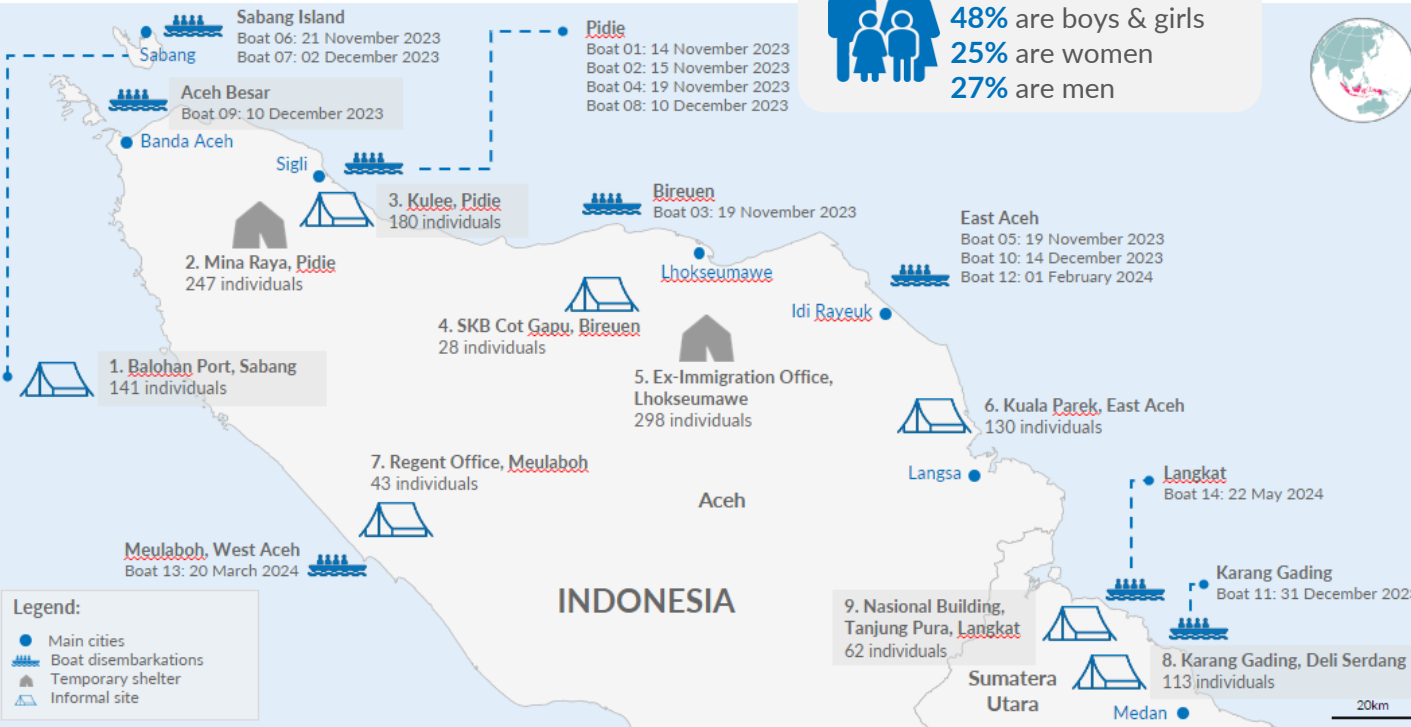

While many Indonesians remain supportive of and sympathetic to the challenges facing Rohingya refugees, the most recent boat arrivals met unprecedented resistance in Indonesia. Some Rohingya were prevented from disembarking, others disembarked only to be forced by local communities back on the boats and returned to sea, and many of those who disembarked have yet to be allocated adequate shelter by authorities. As a result, hundreds of refugees who have disembarked in recent months are currently living in extremely perilous, overcrowded, and sub-standard conditions in which the protection and assistance response is compromised.

While Rohingya refugees undertake journeys from Bangladesh and Myanmar throughout the year, the majority usually move between November and March when sea conditions are most favorable. Support is needed to bolster the response in the likely event that more boats carrying Rohingya refugees arrive in Indonesia in 2024. In view of this, UNHCR and IOM launched an [emergency appeal](#) in December 2023 requesting USD 5.4M (USD 2.5M for UNHCR) to urgently respond to refugee boat arrivals in Indonesia through June 2024. However, only a fraction of needed funding has been received by UNHCR to date. The Rohingya boat arrival response remains seriously underfunded.

OVERVIEW: DISEMBARKATIONS AND HOSTING SITES

14 November 2023 to date

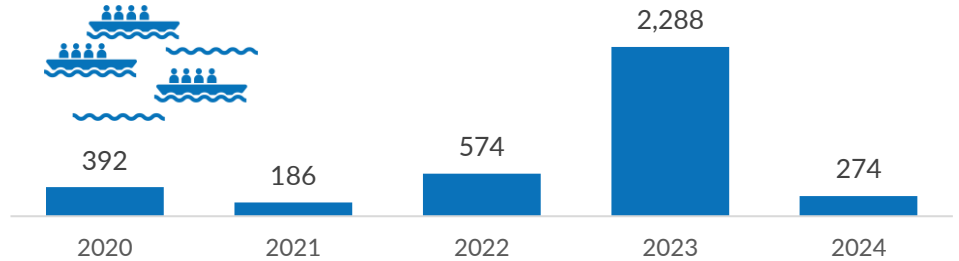

2,026 new arrivals
48% are boys & girls
25% are women
27% are men

Population figures per hosting site include individuals who arrived by boat prior to 14 November 2023, boat arrivals from 14 November, and babies born post-arrival.

UNHCR RESPONSE

COORDINATION

UNHCR supports Indonesian authorities by leading and coordinating inter-agency preparedness and response at the local, provincial, and national levels, in close cooperation with IOM and other humanitarian partners in Aceh, North Sumatra, and Jakarta. UNHCR's coordination role includes **regular** advocacy with the government, security agencies, and local communities on issues related to Rohingya refugees, international protection principles, and the humanitarian response. UNHCR also chairs inter-agency coordination meetings at the local and national levels. In addition, UNHCR maintains a 4W (Who is Where, When, doing What) matrix to identify assistance gaps and ensure protection issues and basic needs are covered in the **nine** sites where Rohingya refugees are currently accommodated in Aceh and North Sumatra. UNHCR has also engaged with over **50** media outlets, civil society groups, universities, social media platforms/companies, religious leaders, Islamic philanthropies, community-based organizations (CBOs), and influencers at the national and local level to address disinformation, misinformation, and hate speech and contribute to a supportive and informed civil society in Aceh, North Sumatra, and throughout Indonesia.

PROTECTION

UNHCR leads the protection response for Rohingya refugees in Aceh and North Sumatra. Protection activities include advocacy with local authorities and communities to permit the disembarkation of **all boats** in distress at sea and ensuring UNHCR presence at the beach and points of disembarkation to advocate on behalf of individuals landing on the **15** boats. **1,862** new arrivals have been registered and have had their biometrics captured. **1,667** new arrivals have received UNHCR documentation. Verification or refugee status determination to assess international protection needs has been carried out for **164** individuals. UNHCR has also undertaken **122** best interest procedures (of **191** children identified in need) as well as other child protection work for the large number of child spouses, unaccompanied children, and otherwise at-risk children. UNHCR has conducted gender-based violence prevention and response activities and established protection reporting and referral systems in **seven** sites. UNHCR is working with local authorities and security agencies to maintain the safety and security of **all** refugee hosting sites. Prevention and response activities on fraud, sexual exploitation and abuse, and other forms of mistreatment have been implemented in **eight** hosting sites. UNHCR is currently working with **16** host community volunteers who are contributing to the response in the sites. This work builds and maintains social cohesion and peaceful coexistence between refugees and host communities.

ASSISTANCE AND SERVICES

UNHCR, IOM, and partners are working together to deliver lifesaving assistance following initial disembarkation and establish service delivery to ensure basic needs are met. Assistance sectors are led by IOM (shelter, health, and water, sanitation, and hygiene (WASH)) and UNHCR (food and core relief items (CRIs)). Assistance and basic services - the provision of food and CRIs, shelter repairs and rehabilitation, access to WASH, health care, and mental health/psycho-social support - have been established for **all** Rohingya refugees in **nine** hosting sites, although the extent and scope of assistance and services is dependent on the level of access humanitarian partners have to the sites, site locations, the security situation surrounding the sites, the engagement and position of host communities, whether a site has been officially designated by authorities, budget limitations, etc. UNHCR's contributions to assistance and services include the provision of three meals/day for **1,106** refugees.

KEY DEVELOPMENTS AND CHALLENGES

Most recent arrivals

- On 22 and 23 May, two boats carrying 62 individuals (including 17 unaccompanied children) landed near Langkat, North Sumatra. Passengers have informed UNHCR that embarkation points were in Myanmar and Bangladesh. UNHCR is currently registering and collecting information from the new arrivals, including regarding previous registration status, the reasons for travel, and any protection incidents that occurred on board.
- Initial interviews indicate that there is a third boat carrying approximately 50 refugees who traveled with the 62. UNHCR does not yet have information on this boat, including whether and where it has disembarked.
- After initial rejection by the local community required their relocation, these 62 individuals are currently accommodated in a government building at Tanjung Pura and emergency assistance is being provided.

Site designation and consolidation

- Refugees are currently hosted in nine locations across Aceh and North Sumatra. Of these, only two have been officially designated as refugee hosting sites by Indonesian authorities. The other seven sites are informal and often remote locations which impede the delivery of protection and assistance.
- It is imperative that, as per the Presidential Regulation, local authorities – in consultation with provincial and national authorities – designate shelters that can accommodate those currently in the informal sites as well as future Rohingya boat arrivals. The designation of sites and the consolidation of the current nine sites into fewer locations will enable more robust protection and assistance programs; allow for more consistent coverage of the sites by UNHCR, IOM, and partners; and will reduce tensions with local communities hosting refugees immediately after disembarkation and in locations that have not been designated by authorities.

Misinformation, disinformation, and hate speech

- An online campaign of misinformation, disinformation, and hate speech directed at Rohingya refugees and UNHCR, in particular, was prevalent in Indonesian media and social media in late 2023 and early 2024. This [negatively impacted](#) refugees and humanitarian actors on the ground in Aceh, including pushbacks, protests, a mob attack, forced relocation, personal threats to staff members, etc.
- Efforts to understand the reasons behind the campaign, remove online hate speech, and correct misinformation and disinformation are ongoing. These include engaging with social media platforms to address issues of concern, sharing facts on UNHCR and Rohingya refugees online and in traditional media, working with security agencies and relevant government ministries, engaging prominent and influential Acehnese, as well as holding discussions with universities, civil society, CBOs and other groups to promote mutual understanding.

Rescue and disembarkation of boats in distress

- On March 21, 2024, the Indonesian Search and Rescue Agency responded to a capsized refugee boat, carrying 142 passengers, off the west coast of Aceh. 75 individuals were rescued and brought to shore, where they are receiving assistance and support. 67 individuals are believed to have drowned, including at least 27 children. Psychological support is being prioritized for the survivors, many of whom lost parents or children in the tragedy.
- UNHCR will continue to work closely with Indonesian authorities and local communities to ensure boats in distress at sea are promptly rescued and that those traveling on those boats are permitted to disembark on Indonesian soil, as per the Presidential Regulation.

Smuggling and onward movement

- As in previous years, some refugees arriving in Aceh have since departed the hosting sites, moving – often with the assistance of smugglers – on to Malaysia or elsewhere in Indonesia. UNHCR continues to monitor onward movements to assess trends and identify protection risks.
- Concerns remain regarding the risk of trafficking and the development of heightened protection and security issues in the hosting sites and elsewhere as a result of the onward movements.

Funding gap

- UNHCR and IOM launched an [emergency appeal](#) in December 2023 requesting USD 5.4M (USD 2.5M for UNHCR) to respond to refugee boat arrivals in Indonesia through June 2024. To date, UNHCR has received only 10% of funding needs. The response remains critically underfunded, and more support is needed to urgently scale up assistance to Rohingya boat arrivals.

UNHCR is grateful to the following donors who are funding the Indonesia operation with earmarked, softly earmarked funding as well as those supporting UNHCR operations globally with unearmarked funding.
